

SL-60/60E

Removable Mullions

Special-Lite Removable Mullions are quickly and easily removed to allow oversized objects to pass through double doors with ease, while providing enhanced security and entrance aesthetics.

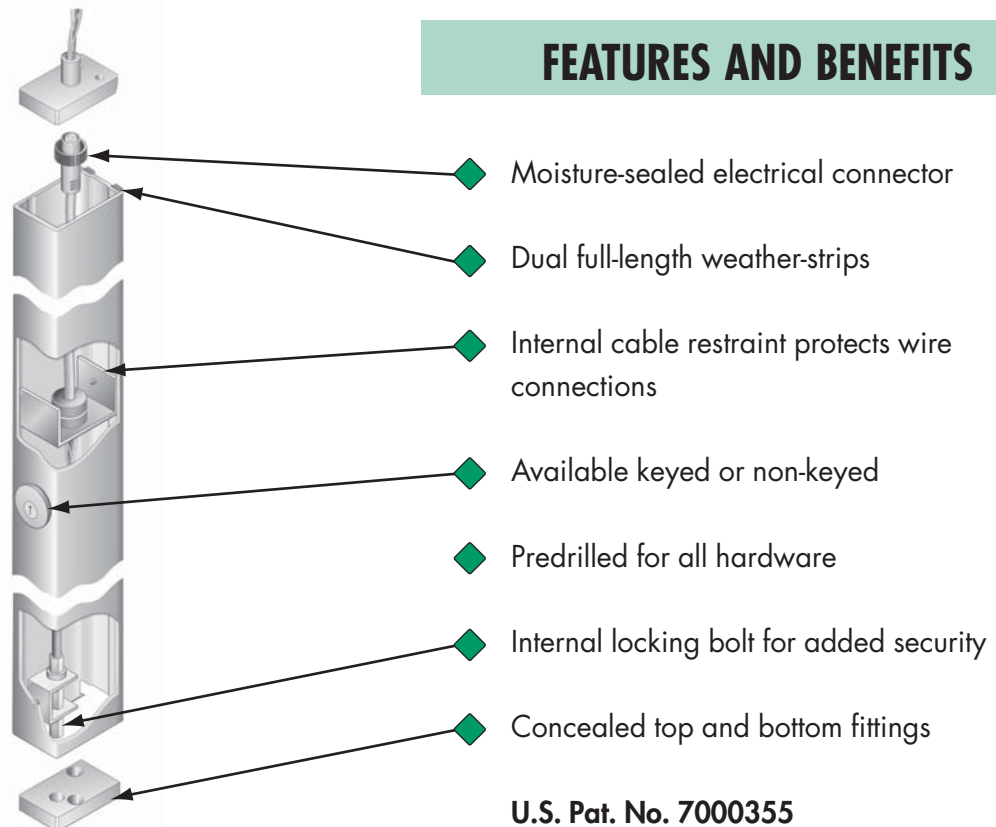

Whether your application calls for the non-electric SL-60, or the new pre-wired SL-60E, Special-Lite Removable Mullions are ideal for applications with framing depths of 4.5" or more where entrance functionality, durability and appearance cannot be compromised. With doors closed, our mullions remain unseen from the building exterior to maintain the look of a flush entryway.

Both the SL-60 and SL-60E are constructed of 3/16" thick, 2"x 3" extruded aluminum for durability, and can

be finished in the full range of Special-Lite class 1 anodized finishes or painted colors to match new or existing framing.

The SL-60E features a standard 5-pin moisture-sealed electrical connector or optional 10-pin connector to accommodate security systems or ADA-compliant hardware. The keyed latching mechanism is in the bottom block so it cannot interfere with the electrical connections in the top block.
