Special-Lite®

Panels

Architectural Panels

Improve security while also providing a solution for broken glass

Add flair and creativity to your entrance designs with Special-Lite® Architectural Panels. Our panels are made with the same face sheet materials as our flush doors and offer the same color and texture options to guarantee a perfect match.

Choose from Pebble Grain FRP, Sandstone-Textured FRP, Wood Grain (both rustic and contemporary), or aluminum, depending on the demands of your particular application.

All architectural panels are made to customer specification in thickness: 1/4", 1" or 1-3/4". Select your panel thickness based on your needs:

1/4" Thick Fiberglass Panel

- Two face sheets bonded back-to-back
- Use in small areas
- Use in areas not requiring thermal insulation

1/4" Thick Aluminum Panel

- Aluminum sheets bonded to .125" tempered hardboard for added rigidity

1" Thick Panel

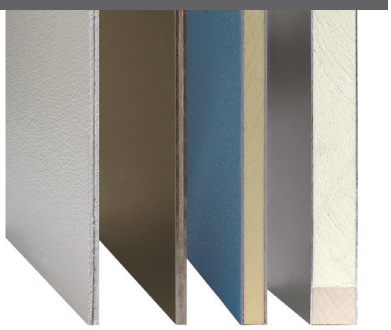

- Urethane foam core
- Foam core bonded between outer skins
- Impervious to water
- Thermal performance is R-value 4.3

1-3/4" Thick Panel

- Typical wood frame construction; special conditions may have aluminum frame.
- Poured-in-place urethane foam core
- Extremely strong panel
- Thermal performance is R-value 10

Architectural Panel thicknesses

Features of our Panel Texture Options
