# Privacy Flush Vision Panel

## Product Data Sheet

Privacy Flush Vision Panel handles are available in single- or double-sided operation. Handles are machined from solid 316-grade stainless steel.

Privacy Flush Vision Panels are fully sealed glazed units with an interstitial operable blind. Using the latest glass technology, they provide a vision panel solution designed for healthcare and clean room environments. Privacy Flush Vision Panels are glazed flush with both faces of the door, removing any ledge or crevice for dirt or bacteria to harbor.

Our fiberglass doors and frames are engineered and manufactured to be well-suited for sterile environments. Add Privacy Flush Vision Panels for a crevice-free, water-tight seal allowing the doors to be thoroughly cleaned. Privacy Vision Panels sized for glazing in lite kits are also available.

Standard Privacy Flush Vision Panel Sizes		
Code	Glass Size	Description
SQ	10" x 10"	Square Lite
NL	8" x 30"	Narrow Lite
HL	20" x 28"	Half Lite
