

# Proximity Card Reader Prep

## Enhance Entrance Security

Find out more:

## OUT OF SIGHT MEANS OUT OF HARM'S WAY

Improve your building's entry control with our Concealed Card Reader Prep.

Located within the door, the reader is hidden to those without access credentials. This internal mounting keeps the reader out of sight, out of weather, and out of reach of vandals to improve security and protect the card reader unit.

FRP face sheets do not interfere with card reader operation; however, aluminum face sheets are not compatible.

Designed for use with HID Thinline®II reader; requires using an electric hinge or EPT.

### Door Integration

Discreetly tucked within a door pocket, it's protected from tampering, vandalism, and the elements, eliminating installation on an exterior wall or entrance framing.

### More Options

Can be used with our Hybrid FRP Doors or our Monumental Doors with a Midpanel.

### Easily Serviced

Accessible through the lock stile door edge, card reader maintenance is quick and minimally invasive.
